Brando introduces this reader as the new generation of readers, and they're right. With 55 different types of cards supported and a compact and well designed form factor, you won't leave home without it.

I have tried it intensively with SD, miniSD and memory Sticks formats and it works flawlessly. What I did not like though, was the fact of not having the USB cable integrated in the device. It's always annoying to carry the cable.

The price is 28\$ and you can buy it [here](#)
