

Hands-on Moto Q

We've had the chance to review a great alternative to Palm Treo. In my opinion, the Moto Q is the closest device to Palm Treo 750v but with a longer lasting battery and a great camera. The Moto Q is very slim but it feels like a brick in your hand: it's too large. The keyboard is very good but if you have big hands you'll have a hard time to type. What is really outstanding again is WinMo6: it's rock solid and very fast and makes navigating on this device a really fast experience.

It's a pity that Motorola hasn't included WiFi on this device but in revenge you can access via HSPDA and use the Moto Q as a Bluetooth modem on your laptop.
