

## iPod touch: the best browsing experience

Contributed by Admin

Over the years I have been trying to find the best device that you could carry in your pocket and surf the web on the go. I have tested Palm, Windows Mobile and Blackberry devices and most of them are just perfect (especially the Blackberry) for PIM purposes but I have never found such a great browser as Safari. No more mobile versions, everything will do with Safari and the new apps released by Apple (IMHO it's a well spent money) will increase the functionality of the device a lot.
